

WHAT IS CLAIMED IS:

1. A digital photographic product for use in an inkjet printer, said product comprising:
 - a liner;
 - an adhesive adhered to said liner;
 - a photographic paper releasably carried by said adhesive, said photographic paper having a continuous, uninterrupted half-cut extending through said photographic paper but not through said liner, to define a photograph area smaller than a photographic image to be printed on said photographic paper by an inkjet printer, thereby leaving a marginal portion outside of said photograph area, so that, when said photographic image is printed on said photographic paper using said inkjet printer, said photograph area can be peeled from said marginal portion of photographic paper and said adhesive to produce a photograph having smooth edges and no adhesive adhered to said photograph.
2. The digital photographic product as recited in claim 1, wherein said digital product is dimensioned in standard sizes and said photograph area is dimensioned in standard sizes.

3. The digital photographic product as recited in claim 1, wherein said liner has a weight and said photographic paper has a weight, and said weight of said liner is less than said weight of said photographic paper.

4. The digital photographic product as recited in claim 1, wherein said half-cut is has rounded corners

5. A digital photographic product made by a process comprising the steps of:
releasibly adhering photographic paper to a liner to form a photographic product so that said photographic paper can be peeled from said liner without adhesive remaining on said photographic paper;

cutting said photographic product into uniform sheets of pre-determined size;
making a continuous, uninterrupted, half-cut through said photographic paper but not through said liner of each sheet of said photographic paper to define a photograph area that, when a photographic image is made on said photographic paper of said each sheet, said photograph area can be peeled from said sheet to have a photograph with smooth edges and no adhesive adhered to said photograph.

6. The digital photographic product, as recited in claim 5, wherein said process further comprises the step of printing on said photographic paper with an inkjet printer a photographic image larger than said photograph area so that said photographic image extends beyond said half-cut.

7. The digital photographic product, as recited in claim 5, wherein said process wherein photograph area is a standard size of photograph.
8. The digital photographic product, as recited in claim 5, wherein said photograph area has rounded corners.
